Abstract: Among the three dimensional activities and point of view it's seen in terms of counting and measurement the visible and invisible multi dimensional things; people are using a scale for measuring the length that is known as meter/ kilometer etc. For measuring liquid they are using the scale of liter/ gallon etc. For measuring time they are using year/month/day/hour/minute/second. But this is where people are making mistake while counting TIME. Actually, they are not counting the time by year/month/day/hour/minute/second. They are actually counting the rotation of the earth on its own axis and the movement around the sun.

Keywords: time, space, relativity, time dilation, twin paradox, quantum rotation, Albert Einstein , 4th dimension, 3rd dimension

1. INTRODUCTION

During researching to find out a way to travel time individually without any affiliation to any institute and no source of funding I found something which I like to point out as a "Major Point" that will be a highlighted point and that is going to be a "Possible change" in near future.

Ever since the people of the earth started counting everything, they are using scale for their daily necessities. From ancient period people are using a scale for measuring the length that is meter/ kilometer/mile/inch etc. For measuring liquid they are using the scale of liter/ gallon etc. For measuring time they are using year/month/day/hour/minute/second. But this is where people are making mistake while counting TIME. Actually they are not counting the time by year/month/day/hour/minute/second. They are actually counting the rotation of the earth on its own axis and the movement around the sun.

2. ASSUMPTION

Year/month/week/day/hour/minute/second etc. are not the unit of measuring the TIME. Year/month/week/day/hour/minute/second etc. are the unit of measuring the rotation of the earth.

3. LOGIC OF ASSUMPTION

Even the great most scientist as Albert Einstein had mistook to recognize and define time. During define the theory "TIME DILATION" he mentioned TIME as the clock time . But clock time is not the counting scale of TIME – 4th dimension. It's the counting scale of rotation of the earth around the sun [1]

Actually, from faster speed thing as light, the slower speed thing as rotation of the earth would seem that it is stopped. But in fact it would not stop but our imagination will give a feeling to us that rotation has stopped compared to the speed of light. Thus, it will make us feel like the clock is stopped at the speed of LIGHT.

As per Stephen Hawkins Black Hole theory its is seen that he also considered the clock time as the unit of counting the time. And mentioned that the Time fluctuates in Black Hole. But In fact time doesn't fluctuate in or near Black Hole. [2]

Actually, the huge thing as Black Hole will influence the rotation speed of the earth fluctuate due to its own force of attraction. Thus, it will hamper the clock not the TIME-4th dimension.

4. THE POSSIBLE CONSTANT OF TIME

Time is the 4th dimension. The "Present" becomes "Past" with no space. The same moment the "Present" becomes past. So, present has no extra value. We may take it granted that present exists and occur on "0" hour. Thus, we can say that Present = 0 or Pr=0. And if we put the time chart or diagram

on a graph paper, we may notice that Future side will remain always in the positive side. And Past will remain in negative side Thus, we can say that Future= + (positive) and Past= - (Negative). Now if we add Past with Future we may get the present. Such as

Past + Future = Present ,or

+ (positive) add – (negative) = 0 [where past = - , future = + and present = 0]

And if we check anywhere in this 3rd dimensional space, we may find that every where the present will occur in 0 hour and will become past in 0 hour too. Thus we can say that Pr= 0 is a universal constant for time. [3]

Thus, I can say that speed of light won't be helpful to travel time rather a gate way may help to travel time in the past or in the future. [4]

Lastly, my find is that actually which scientists are calling TIME, is not time at all. It's the rotation of the earth around the sun and its own axis which everybody is calling time the 4th dimension. In the Earth it takes 24 hours to end a whole day. But in the Saturn it will take only 9 hours 53 minutes. Does it mean that Time of Saturn is different from the time of the earth? Not at all the spinning rate of Saturn is more than the earth. Thus we can say that the quantum rotation of the earth or anything is not TIME at all. [5]

5. MAJOR FINDING WITH DECISION

So, my finding is “The unit of counting/calculating TIME is not Years/Month/day/Hour/Minute/Second. The measurement of earth rotation is Years/Month/day/Hour/ Minute/Second.” its 2019 year means the earth moved around the sun for 2019 times after the death of Jesus. Its morning 10:00 AM means the earth moved on its own axis from behind to in front of sun and its position is in a particular angle. If we count the clock as the unit of TIME, it's possible that we may be directed in a wrong way. Although Albert Einstein could able to introduce his great discovery of $e=mc^2$ prior of doing this mistake yet nobody can guarantee how much accurate or lucky he was to escape due to relativity based education but everybody may not be fortunate enough to achieve a perfect 100 percent accurate result assuming rotation of the earth as the measuring scale of TIME- the 4th dimension.

Thus, it's time to change the previous thought “Years/Month/day/Hour/Minute/Second “ are the measuring scale of counting TIME and change it in to a revised form “Years/Month/day/Hour/ Minute/Second “ are the measuring scale of counting rotation of the earth.
